

Difference Between Module and Function (Node.js)

1. Module Example (Node.js)

```
const fs = require('fs'); // fs is a module
```

- fs is a module.
- Contains many functions like `readFile()`, `writeFile()`, `unlink()`.

2. Function Example (Node.js)

```
fs.readFile('data.txt', 'utf-8', (err, data) => {  
  console.log(data);  
});
```

- `readFile()` is a function inside the fs module.
- It performs one task → reading a file.

Simple Visual:

Module (fs)

- `readFile()`
- `writeFile()`
- `appendFile()`
- `unlink()`

Summary:

Module = File that contains many functions.

Function = One specific reusable action.
